

## DESCRIPTION

The ARDP aluminium circular diffuser is suited for supplying cooled and heated air, ideally suited for high ceiling installations.

The diffuser can be mounted in the ceiling or freely hung.

The circular shape of the ARDP assures a radial air pattern in all directions, which provides a high level of induction rate of the air in the space.

The centre plaque on the ARDP can be raised for a vertical pattern.

## CONSTRUCTION

The ARDP is made from spun aluminium with removable core for ease of installation and is available in various sizes.

## ACCESSORIES

The diffuser can also be provided with cushion head boxes and butterfly dampers to suit the individual requirements.
