

DESCRIPTION

The PCD ceiling diffuser is designed to suit either supply or exhaust application of cooled or warm air.

The circular shape of the PCD assures a radial air pattern in all directions, which provides a high level of induction rate of the air in the space.

The centre cone on the PCD can be wound up or down to decrease or increase airflow.

CONSTRUCTION

The PCD is manufactured from high quality ABS to ensure a strong durable surface which is resistant to chips and scratches while not fading.
