

### DESCRIPTION

The UD50 universal single deflection high volume is generally used in sidewall applications. It consists of one row of individually adjustable vanes.

The vanes are horizontal so the primary air leaving the outlet is directed above the room occupants and does not reach the occupied zone until well mixed with the secondary air.

If required, air can be directed at an angle to one or both sides also.

### CONSTRUCTION

The frame and blades are of extruded aluminium.

Standard finish is white satin (other finishes available upon request).
