

DESCRIPTION

The LSDHI linear slot diffuser high induction is designed for installation in the ceiling or side wall and is suited for the supply of cooled or heated air with large temperature differential in relation to room temperature.

The LSDHI can be installed in individual lengths or in multiple sections to form a continuous length.

Modules are available in a number of slots ranging from 1 to 4.

Available in either a standard or narrow frame.

The uniquely designed discharge elements are adjustable from the face and enables adjustment of the discharge air stream in various horizontal and vertical configurations.

The clean architectural look makes the LSDHI a very versatile product that blends in many environments.
