

DESCRIPTION

The LT light troffer is suited for supplying cooled and heated air with a large temperature differential with respect to the room temperature.

The light troffer is custom built so that it can easily attach to standard and non-standard light fixtures, ensuring a satisfactory combination so that air is delivered correctly into the occupied zone.

Air is diffused through slots which are mounted on the sides of the light fixtures.

Diffusers are available in both single and double sided and are easily mounted to most manufactures of lights.

CONSTRUCTION

Sheetmetal steel.

Standard lengths of 1200mm or 600mm (other sizes available upon request).

Diffusers are equipped with air pattern controllers painted black.
